

# SERSTECH CHEMDASH 2.0

## Manage - Analyze - Share

Serstech Chemdash 2.0 is a powerful software tool that manages and connects the Serstech Raman devices with the rest of your organization.

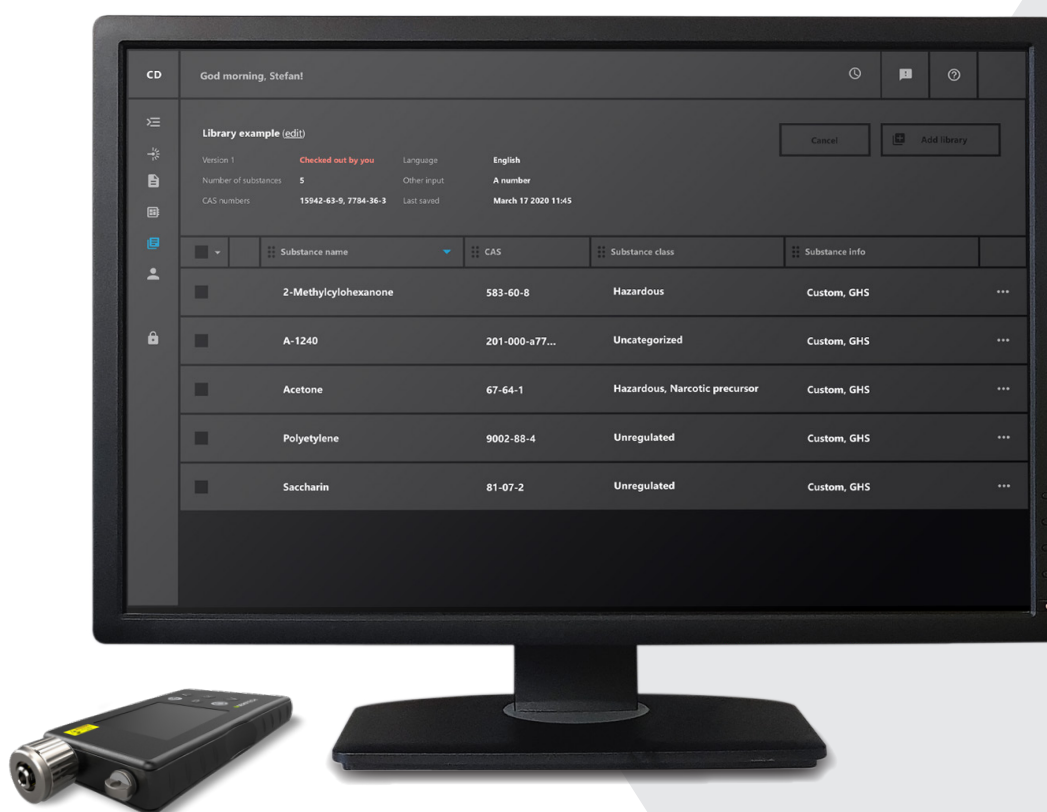

Identification and quick decision making are often the main focus when working with possibly hazardous or illegal substances. Having fast and reliable instruments in place is important for the field operator. Serstech ChemDash 2.0 is the software that makes the identification solution complete for all roles in the team.

Manage devices, users, measurements and reports from one single software. The devices can be prepared with users and other settings, data can be collected and analyzed, and the results can be shared with the rest of the organization. The ChemDash administrator can

create and manage their own libraries, making it possible to tailor sets of substances, based on the measurements. Complete the solution for substance identification and decision making, all through ChemDash.

ChemDash is a powerful tool for all the above and still it only takes seconds to learn. ChemDash 2.0 Lite is a free version made for the small organization, where one instrument can be connected to the system. ChemDash 2.0 Pro brings more possibilities in terms of system and device customizations and allows several devices to be connected and managed.

**"ChemDash is a powerful tool and still it only takes seconds to learn."**

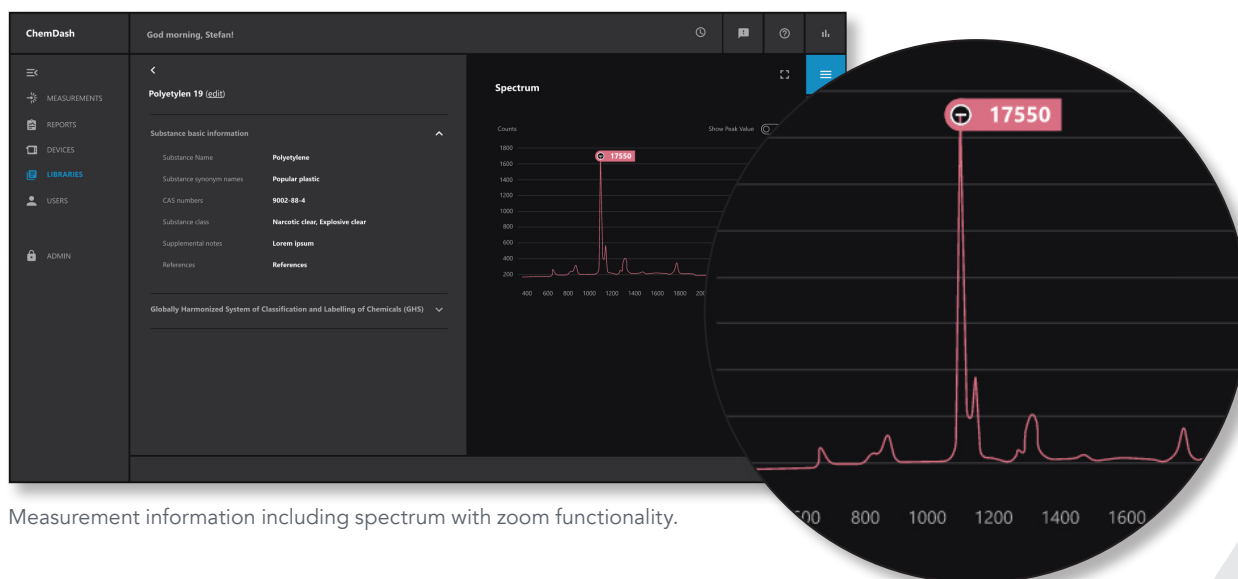

New user interface makes navigation intuitive and efficient. Create libraries, manage measurements, update user settings and share your results with the rest of your organization.

Measurement information including spectrum with zoom functionality.

The screenshot displays the ChemDash interface showing a table of measurements. The table has columns for Title, Time, Device, Scan ID, Type, and a search icon. The table lists several measurements, including Alproazolam, Amorbital, Amphetamine sulfate, Barbitol, Bromazepam, and Bromazepam, with their respective scan IDs, times, and types.

Easy to manage measurements and devices. Analyze the data and share with the rest of your organization.
