

Efficient identification in prisons for faster decisions

Situation

Narcotic substances are often a problem in prisons. The way drugs get in becomes more sophisticated every year. When officers find a substance, they need to identify it in order to take corrective action. It is often hard to identify the substance just by looking and in many cases the substance must be sent to an external laboratory for investigation and identification. This comes with a cost and more important, takes time. The longer it takes the higher the risk of drugs being consumed.

Solution

Having a Serstech 100 Indicator at a prison helps the officers make decisions faster when finding substances. Authorized substances would quickly be put aside since there is no need for further investigation. If it is a regulated substance, the officers can take decision to search the prison right away, not having to wait for time consuming analysis.

Outcome

Using a Serstech 100 Indicator, including narcotics library, will speed up the process for the officers at a prison. Fast decisions will make it possible to take correct corrective actions faster. This will increase safety for both officers and inmates. And by having the possibility to identify substances onsite, costs will be lowered since there will be less of a need for external laboratories.

Overview

Location:
Prison

Product:
Serstech 100 Indicator
Narcotics and pharma library
